

YORK® equipment deserves YORK parts.

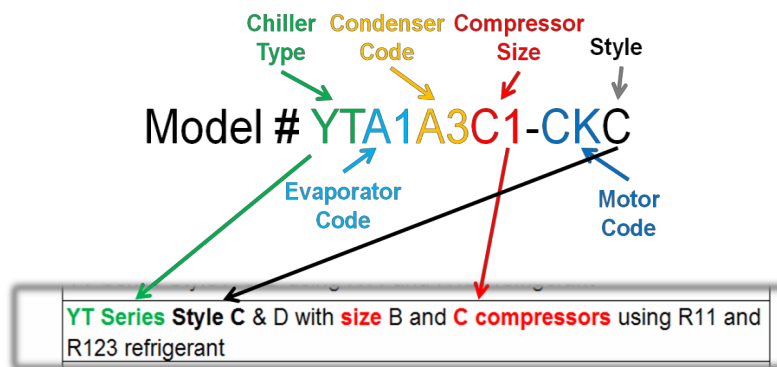

Preventive Maintenance Kits for the most popular chiller models provide what you need for annual servicing in one easy-to-order package. For each chiller maintained, you'll need the following:

1. Preventive Maintenance Parts Kit
2. YORK® PureOil™
3. Inhibitor (coolant)

You'll find the part numbers in the tables that follow, by chiller series and style.

You will also need evaporator and condenser head gasket material. It comes in two types, channel or bulb, and both types come in 25-foot and 50-foot rolls. Each machine needs a different length. Verify the length needed in the unit's parts book or provide the unit's model and serial number to the customer service representative when you call.
